

What differentiates Quorum's IDMS offering from the competition?

XSELLERATOR is a Comprehensive, Truly Integrated DMS

Instead of a collection of loosely (or non) integrated individual modules, Quorum's software is built as a single, integrated system with overall business processes and work flow embedded within the various departmental functions. Departments enjoy unparalleled "horizontal" communication and the dealership benefits from "vertical" integration with General Motors.

XSELLERATOR™ has more factory-to-dealer integration with General Motors than any other dealership management system on the market. Here is just one example of how Quorum seamlessly integrates information between the DMS and GM.

Electronic Vehicle Invoicing (EVI)

XSELLERATOR pulls vehicle invoices directly from GM.

No more re-keying invoices.

No paper invoices on the sales floor.

Invoices are visible on XSELLERATOR to anyone in the store, forever.

A dynamic working copy is automatically created and reflects dealer installed options.

Accounting and inventory data is automatically updated based on invoice information.

Information from the invoice is used throughout the system right through delivery reporting.

If you process 1,000 vehicle invoices per year,
you will save 30 minutes per invoice on data entry.

You will save another 30 minutes per invoice on the sales floor.

Tangible Benefits include:

Time savings of 1,000 hours per year.

Cost savings of \$15/hour = \$15,000 per year.

QUORUM IS THE #1 GM IDMS VENDOR IN NORTH AMERICA
